

Organization Behavior

Instructor: Dr. Anirban Mukherjee

Course Objectives

The specific objectives of the course are:

1. Understanding some of the basic concepts and theories in the field of organizational behavior
2. Examining how individual, group and structural variables interact to create knowledge for prediction and control
3. Appreciate the implication of concepts and theories in the context of Indian situations and research

Books

- **Main Text:** ORGANIZATIONAL BEHAVIOR (14th edition) by **Stephen P. Robbins**. Prentice Hall of India.

Final Exam

Basic Concepts

- Organization-A consciously coordinated social unit, composed of two or more people, that functions on a relatively continuous basis to achieve a common goal or sets of goal.
- Behavior is an action or a reaction caused by either known or unknown stimuli.

BUREAUCRACY

- A component of formal organization that uses rules and hierarchical ranking to achieve efficiency
- Ideal type-A construct or model for evaluating specific cases
- Ideal bureaucracy displays five basic characteristics: division of labor, hierarchy of authority, written rules and regulations, impersonality, and employment based on technical qualifications

Hierarchy of Authority

- Each position is under the supervision of a higher authority
- Such relations can be traced by identifying who is answerable to whom

Division of Labor

- Specialized experts perform specific tasks
- Leads to fragmentation of work and isolates workers from one another
- Leads to alienation. Alienation-Loss of control over our creative human capacity to produce, separation from the products we make, and isolation from our fellow producers
- Lessens job security
- Relative isolation makes us unable to recognize our links with others. Trained incapacity-The tendency of workers in a bureaucracy to become so specialized that they develop blind spots and fail to notice potential problems

Written Rules and Regulations

- Through written rules and regulations, bureaucracies emphasize clear standards for an adequate performance
- Rules are instrumental for the continuity of the organization
- Overemphasis on rules can lead to goal displacement. Goal displacement-Over-zealous conformity to official regulations of a bureaucracy

Impersonality

- Bureaucratic officials perform their duties without giving personal consideration to people as individuals
- Often contributes to a feeling of frustration and disaffection

Employment Based on Technical Qualifications

- Hiring is based on technical qualifications rather than on favoritism, and performance is measured against specific standards
- Yet dysfunctionality exists within bureaucracy
- Peter principle-A principle of organizational life according to which every employee within a hierarchy tends to rise to his or her level of incompetence

Scientific Management Approach

- Proposed by F.W. Taylor and advocated working in systematic manner.
- Scientific Management Involved:
 - ✓ The scientific analysis by management of all tasks which need to be done for maximum efficiency
 - ✓ Designing jobs by managers to achieve the maximum technical division of labor through advanced job fragmentation. It involves division of labor to allow for separation of tasks and functions

Scientific Management Approach

- ✓ Use of time studies to measure and describe work tasks
- ✓ Use of incentive payment systems, both to stabilize and to intensify work effort
- ✓ Manager-worker relationships at “minimum interaction model”
- The natural instinct and tendency of men to take it easy.
