College

Defining Motivation

The result of the interaction between the individual and the situation.

➤ **The processes that account for an individual's intensity, direction, and persistence of effort toward attaining a goal – specifically, an organizational goal.**

➤ **Three key elements:**

- **Intensity** – how hard a person tries
- **Direction** – effort that is channeled toward, and consistent with, organizational goals
- **Persistence** – how long a person can maintain effort

Early Theories of Motivation

These early theories may not be valid, but they do form the basis for contemporary theories and are still used by practicing managers.

- **Maslow's Hierarchy of Needs Theory**
- **McGregor's Theory X and Theory Y**
- **Herzberg's Two-Factor Theory**
- **McClelland's Theory of Needs**

Maslow's Hierarchy of Needs

There is a hierarchy of five needs. As each need is substantially satisfied, the next need becomes dominant.

Assumptions

**Higher Order
Internal**

**Lower Order
External**

Self-Actualization

Esteem

Social

Safety

Physiological

- Individuals cannot move to the next higher level until all needs at the current (lower) level are satisfied
- Must move in hierarchical order

See EXHIBIT 6-1

McGregor's Theory X and Theory Y

- **Two distinct views of human beings: Theory X (basically negative) and Theory Y (positive).**
 - Managers used a set of assumptions based on their view
 - The assumptions molded their behavior toward employees

Theory X

- Workers have little ambition
- Dislike work
- Avoid responsibility

Theory Y

- Workers are self- directed
- Enjoy work
- Accept responsibility

Herzberg's Two-Factor Theory

Key Point: Satisfaction and dissatisfaction are not opposites but separate constructs

See EXHIBITS 6-2 and 6-3

McClelland's Three Needs Theory

➤ **Need for Achievement (nAch)**

- The drive to excel, to achieve in relation to a set of standards, to strive to succeed

➤ **Need for Power (nPow)**

- The need to make others behave in a way that they would not have behaved otherwise

➤ **Need for Affiliation (nAff)**

- The desire for friendly and close interpersonal relationships

Locke's Goal-Setting Theory

➤ Basic Premise:

- That *specific* and *difficult* goals, with *self-generated feedback*, lead to higher performance

➤ Difficult Goals:

- Focus and direct attention
- Energize the person to work harder
- Difficulty increases persistence
- Force people to be more effective and efficient

Bandura's Self-Efficacy Theory

- **An individual's belief that he or she is capable of performing a task.**
 - Higher efficacy is related to:
 - Greater confidence
 - Greater persistence in the face of difficulties
 - Better response to negative feedback (work harder)
 - Self-Efficacy complements Goal-Setting Theory.

See EXHIBIT 6-6

Increasing Self-Efficacy

➤ **Enactive mastery**

- Most important source of efficacy
- Gaining relevant experience with task or job
- “Practice makes perfect”

➤ **Vicarious modeling**

- Increasing confidence by watching others perform the task
- Most effective when observer sees the model to be similar to him- or herself

➤ **Verbal persuasion**

- Motivation through verbal conviction
- Pygmalion and Galatea effects - self-fulfilling prophecies

➤ **Arousal**

- Getting “psyched up”– emotionally aroused – to complete task

Adams' Equity Theory

➤ Employees compare their ratios of outcomes-to-inputs of relevant others.

- When ratios are equal: state of equity exists – there is no tension as the situation is considered fair
- When ratios are unequal: tension exists due to unfairness
 - Underrewarded states cause anger
 - Overrewarded states cause guilt
- Tension motivates people to act to bring their situation into equity

See EXHIBIT 6-7

Equity Theory's "Relevant Others"

➤ Can be four different situations:

- Self-Inside
 - The person's experience in a different job in the same organization
- Self-Outside
 - The person's experience in a different job in a different organization
- Other-Inside
 - Another individual or group within the organization
- Other-Outside
 - Another individual or group outside of the organization

Vroom's Expectancy Theory

The strength of a tendency to act in a certain way depends on the strength of an expectation that the act will be followed by a given outcome and on the attractiveness of the outcome to the individual.

See EXHIBIT 6-9
